D07 – Deployment: Change report

Significant changes

Change 1. Added the @NotNull anotation to "getExpMonth", "getExpYear" and "getCVV" in "CreditCard.java" in the Java Domain model.

Change 2. Corrected the "save()" method in "ApplicationService.java" so it saves properly all the attributes and it checks all the constraints.

Change 3. Modified the conditions to check in the POST save method in ApplicationCustomerController so it doesn't crash when having a credit card with null properties (needed after adding the @NotNull)

Change 4. Fixed some minor errors in views, adding some placeholders, correcting redirect links, messages, etc.

Change 5. Removed the reference to the "profile" folder in "tiles.xml" and "i18n-l10n.xml" to avoid the 404 error that sometimes arose, since the profile folder was deleted some versions before due to being unused.

Change 6. Implemented a new functionality: you can not edit a fix-up task with a valid application, being a valid application: An application with status "Accepted" and a not null credit card.

Change 7. Added a check to make sure that the "TopThree…" methods in the respective services (CustomerService and HandyWorkerService) contemplate the cases in which there are less than 3 and not crash.

Change 8. Corrected the "delete()" Box method in "BoxService.java" since it wasn't deleting a box that had no children.

Change 9. Corrected the "save()" method in "PhaseHandyWorkerController.java" because it was checking the opposite case. Now works as intended.
